

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

# PREVALENCE OF DISEASE.

---

*No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.*

---

## UNITED STATES.

---

### CURRENT STATE SUMMARIES.

#### California Report for the Week Ended Sept. 8, 1917.

The California State Board of Health reported that during the week ended September 8, 1917, 1 case of typhus fever was notified at Perrys, Riverside County; 3 cases of poliomyelitis, 1 each at Oakland, Pomona, and Potter Valley; 1 case of smallpox in Los Angeles and 1 in San Francisco; 38 cases of typhoid fever scattered over the State; 1 case of leprosy in El Monte, Los Angeles County; 1 case of cerebrospinal meningitis in San Francisco. The prevalence of other reportable diseases showed a decrease during the week.

The details of notifiable disease cases reported during the week ended September 1 are as follows:

Cerebrospinal meningitis.....	5	Pneumonia.....	25
Chicken pox.....	26	Poliomyelitis.....	2
Diphtheria.....	20	Scarlet fever.....	40
Erysipelas.....	7	Syphilis.....	19
German measles.....	21	Tetanus.....	1
Gonococcus infection.....	50	Trachoma.....	1
Malaria.....	15	Tuberculosis.....	108
Measles.....	50	Typhoid fever.....	53
Mumps.....	20	Whooping cough.....	35
Pellagra.....	2		

### ANTHRAX.

#### Colorado—Hugo.

On September 10, 1917, 4 cases of anthrax in man were reported in Hugo, Lincoln County, Colo. A large number of cases of the disease are reported to have occurred in cattle in Lincoln County.

**ARE YOU SAVING Your Money to Invest in the SECOND LIBERTY LOAN?**

**ANTHRAX—Continued.****New Hampshire—Manchester.**

During the period from January 1 to July 20, 1917, 4 cases of anthrax were notified at Manchester, N. H., all of the patients having been employees in a shoe factory and three of them engaged in the tannery department of the factory while the fourth case was in the person of a steam fitter who received anthrax infection through a burn on his hand.

**LEPROSY.****New York—Syracuse.**

On August 11, 1917, two cases of leprosy were notified in Syracuse, N. Y., in the persons of D. V., aged 30 years, and N. V., aged 23 years, brothers, natives of Greece, both having been in the United States for a number of years and having resided in New York City previous to going to Syracuse. The patient D. V. has been isolated at Syracuse, but N. V. left Syracuse August 13 and is supposed to have returned to New York City.
